Office Action Summary		Examiner		Art Unit				
		Carl Colin		2136				
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply								
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).  Status								
	1)⊠	_						
	2a)⊠	This action is <b>FINAL</b> . 2b) Thi	s action is non-	īnal.	•			
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.								
Disposition of Claims								
	4)⊠ Claim(s) <u>1-16</u> is/are pending in the application.							
	4a) Of the above claim(s) is/are withdrawn from consideration.							
	5) Claim(s) is/are allowed.							
		6)⊠ Claim(s) <u>1-16</u> is/are rejected.						
	·	7) Claim(s) is/are objected to.						
8) Claim(s) are subject to restriction and/or election requirement.  Application Papers								
•								
9) The specification is objected to by the Examiner.								
10)⊠ The drawing(s) filed on <u>26 April 2004</u> is/are: a)⊠ accepted or b)□ objected to by the Examiner.  Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).								
11) The proposed drawing correction filed on is: a) approved b) disapproved by the Examiner.								
If approved, corrected drawings are required in reply to this Office action.								
12) The oath or declaration is objected to by the Examiner.								
Priority under 35 U.S.C. §§ 119 and 120								
13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).								
	a) ☐ All b) ☐ Some * c) ☐ None of:							
	1. Certified copies of the priority documents have been received.							
	2. Certified copies of the priority documents have been received in Application No							
Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).  * See the attached detailed Office action for a list of the certified copies not received.								
	14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).							
a) ☐ The translation of the foreign language provisional application has been received. 15)☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

### **DETAILED ACTION**

## Response to Arguments

1. In response to communications filed on 4/29/2005 for a continuation of examination, the following claims 1-16 are presented for examination.

2. Applicant's remarks, pages 2-4, filed on 4/29/2005, with respect to the rejection of claims 1-16 have been fully considered, but they are most in view of a new ground of rejection.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3.1 Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6,226,750 to Trieger in view of US Patent 6,473,861 to Stokes and in view of US Patent 5,931,947 to Burns et al.

Art Unit: 2136

3.2 As per claims 1, 4-9, and 12-16, Trieger substantially teaches a secure disk drive comprising: a disk for storing data (see column 6, lines 5-30); (b) and further discloses a message input for receiving the encrypted message from the client disk drive and a data output for outputting the ciphertext data to be written to server's data storage area (see figure 5 and column 11, lines 44-67), the encrypted message comprising ciphertext data and a device ID identifying the client disk drive (see column 10, lines 43-63; column 7, lines 48-55); messages are preferably encrypted (column 9, lines 55-63); and discloses a generator for generating client drive keys based on client drive ID and state information previously stored for use to authenticate the client drive ID (column 4, lines 8-13 and column 11, lines 30-55). Trieger also discloses a key validation process in the server for verifying the authenticity of the encrypted message and generating an enable signal, the authenticator responsive to the encrypted message and the client drive key (see column 10, line 57 through column 11, line 30); a reply output for outputting reply data and a new key that meets the recitation of internal drive ID (column 11, lines 43-46). Although Trieger discloses a secure drive that authenticates a client drive when receiving encrypted request message and output a reply comprising a reply data and a key, Trieger does not explicitly disclose a secure drive key comprising tamper resistant circuit and internal drive ID. Stokes in an analogous art discloses a secure disk drive comprising: a disk for storing data, secure drive key and internal drive ID, and internal drive keys (see abstract and column 7, lines 16-25); tamper resistant circuitry for storing keys so that any attempt to open the disk drive will result in an erasure of stored encryption key material (column 4, lines 12-25 and column 7, line 50 through column 8, line 18; and see also column 8, lines 48-67). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention as combined above to

Application/Control Number: 09/608,103

Art Unit: 2136

modify the secure disk drive of **Trieger** to provide a tamper resistant circuitry for storing keys and to provide secure drive key and internal drive ID for use to authenticate user access (improper user access may lock up the disk drive) as taught by **Stokes**. This modification would have been obvious because one skilled in the art would have been motivated to do so to provide a drive housing that contains optical and magnetic drives, data encryption and formatted modules and erasable memory device with protective mechanism that automatically erases keys in the event of tampering (see column 3, lines 1-20) and adds additional layer of protecting access by validating user ID or key based on drive keys or internal keys (see column 8, lines 13-67) as suggested by **Stokes**.

authentication code. **Burns et al** in an analogous art discloses a data processor comprising: a key input for receiving an internal drive key (see column 8, lines 10-55), internal drive key for use in generating message authentication code (column 9, lines 1-18). **Burns et al** further discloses different protocols in authenticating a response including generating internal drive key based on internal drive ID and secure drive key, for example (see column 8, lines 10-55 and column 9, line 37 through column 10, line 25) and after the request is validated, outputting reply data comprising message authentication code (column 9, lines 14-18) the reply may also contain internal drive ID (column 10, lines 21-67) so that devices can authenticate each other (see abstract). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention as combined above to modify the authentication steps of **Trieger** to provide a validation system where all data requests from clients and responses to them are authenticated using keys derived from secure drive keys and hashed message authentication codes as taught by

Burns et al. The motivation to do so is given by Burns et al who teaches that the advantage of this process guarantees freshness preventing replay because nonces are used in the HMAC therefore other entities cannot impersonate either of the devices (column 7, line 55 through column 8, line 4 and column 8, lines 40-53).

As per claims 2 and 10, Stokes discloses the limitation of using a secure drive key that is immutable (see column 4, lines 13-15). Therefore these claims are rejected on the same rationale as the rejection of claim 1.

As per claims 3 and 11, the combined references above discloses generating new key that is mutable in order to invalidate previously issued external client keys (see **Trieger**, column 11, lines 8-20; see **Burns et al**, column 14, line 34-42). Therefore these claims are rejected on the same rationale as the rejection of claim 1.

### Conclusion

4. Applicant's submission of an information disclosure statement under 37 CFR 1.97(c) with the fee set forth in 37 CFR 1.17(p) on 4/29/2005 prompted the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 609(B)(2)(i). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

Application/Control Number: 09/608,103

Art Unit: 2136

MONTHS of the mailing date of this final action and the advisory action is not mailed until after

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the mailing

date of this final action.

4.1 Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Carl Colin whose telephone number is 571-272-3862. The

examiner can normally be reached on Monday through Thursday, 8:00-6:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Ayaz Sheikh can be reached on 571-272-3795. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see <a href="http://pair-direct.uspto.gov">http://pair-direct.uspto.gov</a>. Should you have questions on access to the Private

PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
